

ATIN SHARMA

Full Stack Engineer · AI Product Builder · VIT Vellore, CSE 2025

atinsharma24@gmail.com | +91 82185 02886 | linkedin.com/in/atinsharma24 | github.com/atinsharma24 |
Agra, Uttar Pradesh — Open to Remote & Relocation

PROFESSIONAL SUMMARY

Full-stack engineer with a B.Tech in Computer Science from Vellore Institute of Technology (2025) and hands-on founding experience at an Indian AI startup. Served as one of three founding technical leads at OpenBiz Software, shipping two AI-powered products — VyaparGPT (a WhatsApp-based LLM business assistant) and a Website Builder — for Indian SMBs. Brings end-to-end product engineering capability: Next.js frontends, Node.js backend APIs, PostgreSQL optimisation, RAG pipelines, real-time infrastructure, payment gateway integration, and CI/CD automation. Experienced with OpenAI, Google Gemini, and Groq APIs, and actively building Nimbus — an open-source RAG-powered document workspace. Targeting product-first engineering roles in AI, fintech, and developer tooling.

PROFESSIONAL EXPERIENCE

Full Stack Developer — Founding Engineer Aug 2025 – Mar 2026
OpenBiz Software India Pvt Ltd · Remote (Bangalore-registered) · Full-time

One of three core technical leads at an early-stage Indian AI startup. Architected and shipped two products — VyaparGPT and a Website Builder — for Indian small and medium businesses.

- Architected VyaparGPT — a WhatsApp-based AI business assistant for Indian SMBs — using Node.js, React, and OpenAI / Gemini LLM APIs
- **reducing API response times by 40%** Optimised PostgreSQL (Supabase) query performance through indexing and caching strategies,
- Engineered a WhatsApp Automation Bot using Node.js to automate client communication and reduce manual support volume
- Implemented real-time bidirectional support chat using Socket.IO and video conferencing via VideoSDK
- Integrated Razorpay payment gateway for secure recurring subscription management and order processing
- **improving team deployment efficiency by 30%** Established CI/CD workflows using Git and Vercel,
- Developed an AI document processing module using Google Gemini API for automated business data verification
- Built a full Website Builder product alongside VyaparGPT as the second core offering of the platform

KEY PROJECTS

Nimbus — AI Document Workspace In Development · 2026

Stack: Next.js 14, TypeScript, PostgreSQL, pgvector, Prisma, NextAuth.js, Groq API, OpenAI

- Building a RAG-powered document workspace with streaming LLM responses via Groq API and semantic search over user documents using pgvector
- Implemented vector search using pgvector (PostgreSQL extension) with cosine similarity for precise semantic retrieval
- Designed async document ingestion pipeline with 429 retry logic and per-document status tracking
- Built a provider-agnostic LLM layer supporting Groq, OpenAI, and Anthropic with one-config switching

DocGPT — RAG Document Assistant Completed

Stack: React 19, Python (Django), ChromaDB, Sentence Transformers, OpenAI, Docker

- Built a Retrieval-Augmented Generation (RAG) system enabling natural language querying of PDF documents via semantic search
- Implemented semantic vector search using ChromaDB and Sentence Transformers (all-MiniLM-L6-v2) for cost-efficient local embeddings
- Engineered a text chunking pipeline using PyPDF2 with overlap strategies to preserve context across chunk boundaries
- Developed Django REST API backend to orchestrate retrieval → context injection → GPT-4o-mini response pipeline

Automated Content Intelligence PipelineCompleted

Stack: React 19, TypeScript, Node.js, Laravel, OpenAI, Gemini, Docker, GitHub Actions

- Designed a multi-stage TypeScript content pipeline that scrapes, analyses, and AI-rewrites news articles at scale
- Built React 19 frontend with a split-screen Diff View comparing original vs AI-rewritten content in real-time
- Engineered a Puppeteer-based scraper to bypass client-side rendering and extract structured article metadata
- Integrated Google Gemini and OpenAI models with failover logic for content rewriting with factual accuracy
- Deployed microservices architecture using Docker and GitHub Actions cron jobs for self-healing automated ingestion

TECHNICAL SKILLS

Languages: JavaScript · TypeScript · Python · Java · SQL · HTML · CSS

Frontend: React.js · Next.js (App Router) · React Native · Redux Toolkit · Tailwind CSS · shadcn/ui

Backend: Node.js · Express.js · NestJS · Django / DRF · Laravel

Databases: PostgreSQL · MongoDB · Supabase · pgvector · ChromaDB · Redis

AI / LLM: OpenAI API · Google Gemini API · Groq API · RAG Pipelines · LangChain.js · Vercel AI SDK · Prompt Engineering · Vector Search

DevOps: Docker · GitHub Actions · Vercel · CI/CD Pipelines · Git · Prisma ORM

Tools: Socket.IO · Razorpay API · Puppeteer · Postman · VideoSDK · Supabase

EDUCATION

B.Tech — Computer Science & EngineeringAug 2020 – Nov 2025

Vellore Institute of Technology (VIT), Vellore · Degree Status: Completed

- Focus areas: Full Stack Development, AI Systems, Information Security Management, Image Processing (CNNs), Cyber Security

AVAILABILITY & ROLE PREFERENCES

Availability	Immediately available — 0 days notice period
Employment Type	Full-time
Work Preference	Remote strongly preferred; open to Bangalore, Delhi NCR, Hyderabad
Relocation	Open to relocation within India
Expected CTC	15–18 LPA (negotiable based on role and company)
Target Role	Software Engineer / Full Stack Developer / Backend Engineer
Target Companies	Razorpay, Intuit, Atlassian, Swiggy, PhonePe, Postman, BrowserStack, Freshworks
Visa Sponsorship	Not required for India; required for US / UK / EU

*This document is intended as a supplementary professional profile to accompany the attached résumé.
