PROFILE

Full-Stack Engineer with a focus on building resilient, cloud-native architectures and high-performance backend systems. Expert in TypeScript/MERN stack with extensive experience in CI/CD automation, Dockerized microservices, and database optimization. Founding engineer background in shipping scalable platforms from zero-to-one with 100% payment-state consistency and robust AWS/Vercel deployments.

- Engineered idempotent billing: Razorpay HMAC webhook + re-entrant idempotency — 100% payment consistency.
- CI/CD (GitHub Actions + Vercel): 30% faster deployments, zero broken-build incidents.
- N+1 fix (JOIN rewrites, composite indexes, TTL cache) — 40% API latency reduction.

PROFESSIONAL EXPERIENCE

AGI Ready Inc.

Jun 2026 – Present

Full-Stack Developer

Remote / Delaware, US

- Own production systems end-to-end — debugging, deployment, and release — across multiple concurrent client products.
- Architect and integrate service APIs and asynchronous background workflows spanning third-party platforms, AI/LLM providers, and webhook receivers.
- Build and ship full-stack features in Next.js, TypeScript, and Node.js, using Claude Code and Codex as primary development tools with architectural judgement over prompt-level iteration.

OpenBiz Software India Pvt Ltd

Jun 2025 – May 2026

Founding Engineer

Remote / Bangalore

- Engineered a parallel Graph RAG pipeline using LangGraph state machines routing queries into async multi-threaded retrieval paths; built a dual-database ingestion router (Drizzle ORM) partitioning unstructured data into Pinecone (hybrid dense/sparse) and structured compliance data into Supabase (PostgreSQL/pgvector).
- Designed runtime evaluation guardrails intercepting Cohere Re-rank v3 cross-encoder scores with an absolute < 0.4 confidence threshold hook enforcing strict context-locking.
- N+1 fix + Razorpay HMAC idempotency — **40% API latency reduction, 100% payment-state consistency.**
- CI/CD (GitHub Actions + Vercel): automated testing per PR, staging on merge — **30% faster deployments**, zero broken-build incidents.

PROJECTS

Nimbus — AI RAG Workspace | github.com/atinsharma24/nimbus

In Development 2026

- Stack: Next.js 14, TypeScript, PostgreSQL, pgvector, Prisma, Groq API, OpenAI
- Async queue ingestion with overlap chunking; pgvector cosine search for hybrid SQL + semantic filtering — sub-800ms retrieval.
- Provider-agnostic LLM layer (groq|openai|anthropic) + SSE streaming; 429 retry with exp. backoff and per-document status tracking.

DocGPT — RAG Document Assistant | github.com/atinsharma24/docgpt

- Stack: React 19, Python (Django), ChromaDB, OpenAI, Docker
- Django RAG pipeline: PyPDF2 overlap chunking, local all-MiniLM-L6-v2 embeddings (offline, zero API cost), ChromaDB cosine retrieval, GPT-4o-mini generation; Dockerized.

Autonomous Web Agent | github.com/atinsharma24/auto-agent

- Stack: Python, Groq, BrowserOS (MCP), Claude 3.5 Sonnet
- Claude 3.5 Sonnet Executor (DOM + form reasoning) + Groq Watcher (page-state validation between steps).
- MCP via BrowserOS for structured DOM access; persistent queue with URL dedup and WAF/CAPTCHA detection.

Automated Content Intelligence Pipeline | github.com/atinsharma24/pipeline

- Stack: React 19, TypeScript, Laravel, OpenAI, Gemini, Docker, Puppeteer
- Puppeteer SPA scraping; Gemini → OpenAI fallback rewriting; React 19 Diff View with per-article state machine; Dockerized microservices on GitHub Actions cron.

SKILLS

Focus Stack: TypeScript, Node.js, NestJS, PostgreSQL, AWS (S3, DynamoDB), Docker, GitHub Actions, Vercel, Microservices.

Languages: JavaScript/TypeScript, Python, SQL, Java

Frontend: React (v18/19), Next.js, React Native, Redux Toolkit, TailwindCSS

Backend/DB: Node.js, Express, NestJS, Django, PostgreSQL, MongoDB, pgvector, ChromaDB

AI/LLM: OpenAI, Google Gemini, Groq API, RAG Pipelines, LangChain.js, Sentence Transformers, Prompt Engineering

DevOps: Docker, GitHub Actions, Vercel, AWS (S3, DynamoDB)

Tools: Git, Postman, Socket.IO, Razorpay SDK, VideoSDK, Puppeteer

Patterns: Webhook Validation (HMAC-SHA256), N+1 Optimization, Vector Similarity Search, Provider-Agnostic LLM Layers, Idempotent Events

EDUCATION

Vellore Institute of Technology

2026

B.Tech in Computer Science and Engineering

Vellore

- Research (2025): Blockchain-based LLM + FHE for encrypted-data inference without decryption; blockchain provides credential audit trail.
